

Lipton Fresh Brewed Tea

Brewing Instructions

For the typical BUNN brewer: The brewer must be ready before the brew cycle can begin. Press the “Enable Brew On/Off” button and the light on the button will illuminate.

When the brewer is ready, the display screen will read “READY TO BREW WATER TEMP 205°”

Use one 3oz tea bag for a 3-gallon brew. A case of Unsweetened Tea contains 32 3oz tea bags.

1. Place the tea bag in the center of the brew basket. For a 3-gallon brew, place one tea bag in the basket. Slide the brew basket on to the rails until it stops at the back of the brewer.
2. Center clean, lined urn, without lid, under the brew basket. If you are using the two urn water diverter system, rotate the brew basket funnel over the urn that will be used for brewing. Place the water diverter nozzle into the selected urn.
3. Ensure the display screen message indicates the brewer is ready to brew.
4. Press the “FULL” button for a 3-gallon brew. The “FULL” button should be the **ONLY** button used for Lipton Fresh Brewed Iced Tea
5. Once brew cycle is complete, remove urn from brewer and place on counter.
6. For **UNSWEET** tea, proceed to step 8
7. For **SWEET** tea, once brew cycle is complete, empty **ONE** 3lb bag (or 6 measured cups) of sugar into the urn with the brewed tea. Use a rubber spatula (at least 16” long) to stir the tea for approximately 20-30 seconds until the sugar is fully dissolved.
8. Discard the tea bag from the brew basket after the brew cycle is finished. *Never re-use tea bags.*
9. Place the lid on the urn and return it to the brewer base, with the spout facing outward. Two urns can fit side-by- side on the brewer base.

Maximum hold time is 8 hours. Do NOT keep brewed tea overnight.

Above instructions are intended for the Bunn Pre-Programmed ITCB-DV Infusion Brewer

Brewer Settings
